

**Template periodic disclosure for the financial products referred to in Article 8, paragraphs 1, 2 and 2a, of Regulation (EU) 2019/2088 and Article 6, first paragraph, of Regulation (EU) 2020/852**

**Product name:** Gebalanceerd  
**Legal entity identifier:** 2549001D1TTYZU8BMS96

## Environmental and/or social characteristics

**Did this financial product have a sustainable investment objective?**

<input checked="" type="radio"/> <input type="radio"/> <b>Yes</b>	<input checked="" type="radio"/> <input type="radio"/> <input checked="" type="checkbox"/> <b>No</b>
<input type="checkbox"/> It made <b>sustainable investments with an environmental objective:</b> ___% <div style="margin-left: 20px;"> <input type="checkbox"/> in economic activities that qualify as environmentally sustainable under the EU Taxonomy  <input type="checkbox"/> in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy                 </div> <input type="checkbox"/> It made <b>sustainable investments with a social objective:</b> ___%	<input type="checkbox"/> It <b>promoted Environmental/Social (E/S) characteristics</b> and while it did not have as its objective a sustainable investment, it had a proportion of 32.99% of sustainable investments <div style="margin-left: 20px;"> <input type="checkbox"/> with an environmental objective in economic activities that qualify as environmentally sustainable under the EU Taxonomy  <input type="checkbox"/> with an environmental objective in economic activities that do not qualify as environmentally sustainable under the EU Taxonomy  <input type="checkbox"/> with a social objective                 </div> <input checked="" type="checkbox"/> It promoted E/S characteristics, but <b>did not make any sustainable investments</b>

For this reporting period, QAM has transitioned its primary ESG data provider to Clarity AI. This change may lead to variations in certain sustainability indicators, as differences in methodology, data collection processes, estimation techniques, and coverage levels between providers can naturally result in shifts in reported figures.

**To what extent were the environmental and/or social characteristics promoted by this financial product met?**

The following environmental and social characteristics were promoted by the Sub-Fund during the reporting period:

- Adherence of investee companies to internationally recognised standards related to human rights, labour rights, the environment, and anti-corruption.
- Limiting the significant negative impact related to the use of controversial weapons.
- Limiting investments in sovereigns that are subject to EU arms embargoes;
- Making a minimum proportion of sustainable investments in accordance with Quintet Asset Management’s (QAM) proprietary sustainable investment framework.

To do this, the Sub-Fund applied the following binding elements as defined in the investment process:

1. For investments in a single asset class:
  - a. The exclusion criteria applied to all investments.
  - b. All investments in companies had to comply with the principles of the United Nations Global Compact.
2. For investments in funds:
  - a. They had to achieve a minimum score in the sustainability due diligence process in order to be invested by the Sub-Fund, based on the assessment of the five pillars of the sustainability due diligence process (intentionality, portfolio characteristics, research, active ownership and transparency).
  - b. Funds were also required to have an active shareholding policy with respect to investments in companies, where possible and practicable, namely voting activities and engagement practices for shares, and engagement practices for corporate bonds.

● ***How did the sustainability indicators perform?***

The Sub-Fund used the following sustainability indicators to measure the attainment of each environmental or social characteristic promoted by the Sub-Fund:

- Adherence of investee companies to the United Nations Global Compact: 67.43% (0.02% did not meet the criteria for this sustainable indicator and for 32.55% there was no relevant data to measure this indicator because of the nature of the investment, such as sovereign bonds and cash or absence of data).
- Involvement of investee companies in controversial weapons: 0% (For 32.55% there was no relevant data to measure this indicator because of the nature of the investment, such as sovereign bonds and cash or absence of data).
- Investments in sovereigns that are subject to EU arms embargoes: 0%
- Proportion of sustainable investments in accordance with QAM's proprietary sustainable investment framework: 32.55%

These sustainability indicators were measured as a percentage of investments of the Sub-Fund. They have not been subject to assurance provided by an external auditor or reviewed by a third party. The above information are based on the Sub-Fund's investments as of 31 December 2025.

**Sustainability indicators** measure how the environmental or social characteristics promoted by the financial product are attained.

● **...and compared to previous periods?**

<b>Sustainability indicator</b>	<b>2023</b>	<b>2024</b>	<b>2025</b>
<i>Adherence of investee companies to the United Nations Global Compact</i>	45.74%	67.55%	67.43%
<i>Involvement of investee companies in controversial weapons</i>	0.08%	0.04%	0.00%
<i>Proportion of sustainable investments in accordance with QAM's proprietary sustainable investment framework</i>	30.70%	34.51%	32.99%
<i>Investments in sovereigns that are subject to EU arms embargoes</i>	0%	0%	0%

● **What were the objectives of the sustainable investments that the financial product partially made and how did the sustainable investment contribute to such objectives?**

Not applicable.

● **How did the sustainable investments that the financial product partially made not cause significant harm to any environmental or social sustainable investment objective?**

Not applicable

— *How were the indicators for adverse impacts on sustainability factors taken into account?*

Not applicable

— *Were sustainable investments aligned with the OECD Guidelines for Multinational Enterprises and the UN Guiding Principles on Business and Human Rights? Details:*

Not applicable

*The EU Taxonomy sets out a “do not significant harm” principle by which Taxonomy-aligned investments should not significantly harm EU Taxonomy objectives and is accompanied by specific Union criteria.*

The “do no significant harm” principle applies only to those investments underlying the financial product that take into account the EU criteria for environmentally sustainable economic activities. The investments underlying the remaining portion of this financial product do not take into account the EU criteria for environmentally sustainable economic activities.

*Any other sustainable investments must also not significantly harm any environmental or social objectives.*

**Principal adverse impacts** are the most significant negative impacts of investment decisions on sustainability factors relating to environmental, social and employee matters, respect for human rights, anti-corruption and anti-bribery matters.

## How did this financial product consider principal adverse impacts on sustainability factors?

The Sub-Fund considered the principal adverse impacts on sustainability factors via a combination of methods. Through the Sub-Fund's exclusions a range of adverse impacts were avoided in advance by the Sub-Fund as the exclusion criteria relate to areas for which the adverse impacts are deemed too high to be suitable for investment by this Sub-Fund.

Furthermore, for investments that the Sub-Fund did make, the Sub-Fund had further mitigated adverse impacts via structured engagements with issuers (where possible and feasible), and voting (where possible and feasible).

Finally, where the Sub-Fund has invested in funds, these were funds that, where possible and feasible, had a formal policy on how they address principal adverse impacts on sustainability factors.

While all indicators referred to in Table 1 of Annex I of the Regulatory Technical Standards (RTS) of the regulation are directly or indirectly influenced through the different methods and criteria that QAM applies, the indicators that are most explicitly embedded in the QAM Responsible Investment Policy are:

- PAI indicator 4 (companies active in the fossil fuel sector) through the exclusion of single lines related to companies that derive more than 10% of revenue from thermal coal extraction or power generation.
- PAI indicator 10 (violations of UN Global Compact principles and Organisation for Economic Cooperation and Development (OECD) Guidelines for Multinational Enterprises) through the exclusion of single lines related to companies that are considered to be in violation thereof. QAM's engagements also give attention to the companies that are deemed to be in violation.
- PAI 14 (involvement in controversial weapons) through the exclusion of single lines related to company involvement in controversial weapons.

Please refer to [QAM](#) Responsible Investment policy for more information.

For more information on how the Sub-Fund has managed negative impacts via voting and engagement, please refer to [Quintet's Active Ownership Report](#).

QAM is a subsidiary of Quintet Private Bank S.A

## What were the top investments of this financial product?

The list includes the investments constituting the **greatest** proportion of investments of the financial product during the reference period which is: 01 January – 31 December 2025

Largest investments	Sector	%Assets	Country
QMM Actively Managed US Equity Fund Q EUR Hedged Acc	Multiple Sectors	6.98%	Ireland
iShares Inc MSCI USA ESG Enhanced ETF Cap	Multiple Sectors	6.74%	Ireland

The information in the table above is based on average data calculated on the basis of the Sub-Fund's positions at the end of each quarter of 2025.

## What was the proportion of sustainability-related investments?

The proportion of sustainability-related investments of the Sub-Fund was 32.99%.

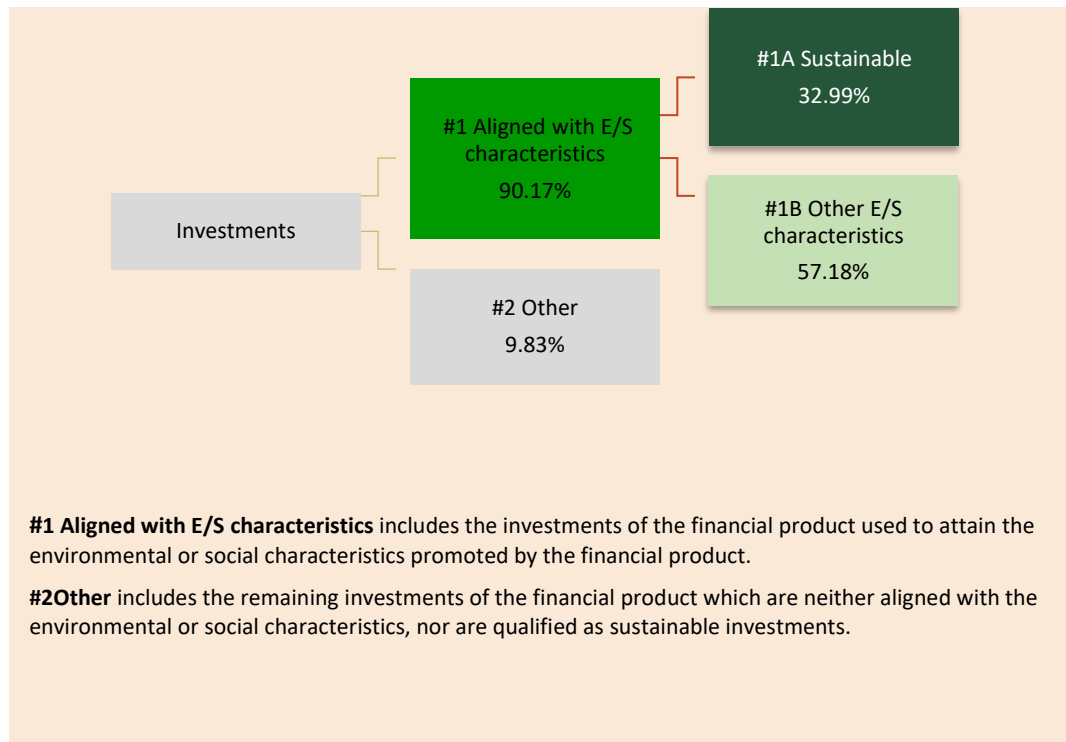

Where investments were made in funds, the percentages of sustainable investments and its subcategories, "Taxonomy-aligned", "Other environmental" and "Social" disclosed by these funds were used in the calculations. The disclosed sustainable investment percentages of third party funds were only used when it was assessed that the sustainable investment objectives of the third party funds are aligned with the sustainable investment objectives of QAM's sustainable investment framework. Where such disclosures were not yet available at the time this document was created, the minimum commitment that these funds disclosed in their pre-contractual disclosures was used as a conservative estimation to calculate the Sub-Fund's asset allocation percentages. Where funds did not disclose any minimum commitments a percentage of 0 was assumed for the respective categories. Since for some funds the only information available was on the percentage of overall sustainable investments but not on its sub-categories, the sum of the sub-categories is lower than the percentage of overall sustainable investments.

The information in this section is based on the Sub-Fund's investments, measured at their Net Asset Value in euros, as at 31 December 2025.

**Asset allocation** describes the share of investments in specific assets.

● **What was the asset allocation?**

90.17% of investments were aligned with the environmental and social characteristics of the Sub-Fund. The remaining portion of investments were related to ancillary cash. They also included funds held for diversification purposes (including ETCs and ETFs) that were not aligned with the environmental and social characteristics of the Sub-Fund.

<b>Sustainability indicator (%)</b>	<b>2023</b>	<b>2024</b>	<b>2025</b>
<i>Aligned with E/S characteristics</i>	91.44%	91.36%	90.17%
<i>Other</i>	8.56%	8.64%	9.83%
<i>Sustainable</i>	30.70%	34.51%	32.99%
<i>Other E/S characteristics</i>	60.74%	56.85%	57.18%

● ***In which economic sectors were the investments made?***

<b>Sector</b>	<b>%Assets</b>
IT	13.61%
Financials	9.62%
Industrials	6.27%
Consumer Discretionary	5.65%
Healthcare	5.42%
Communication Services	4.96%
Consumer Staples	2.43%
Materials	1.75%
Utilities	1.18%
Energy	1.04%
Real Estate	1.00%
Bonds	38.46%
Commodities	4.48%
Cash & Assimilated	4.11%

The information in this section is based on the Sub-Fund's investments, using look-through for as at 31 December 2025.

## To what extent were the sustainable investments with an environmental objective aligned with the EU Taxonomy?

To comply with the EU Taxonomy, the criteria for **fossil gas** include limitations on emissions and switching to fully renewable power or low-carbon fuels by the end of 2035. For **nuclear energy**, the criteria include comprehensive safety and waste management rules.

**Enabling activities** directly enable other activities to make a substantial contribution to an environmental objective.

**Transitional activities** are activities for which low-carbon alternatives are not yet available and among others have greenhouse gas emission levels corresponding to the best performance.

The proportion of investments of the whole Sub-Fund in economic activities aligned with the EU taxonomy regulation was 0%. The proportion of investments for each of the environmental objectives defined in the EU taxonomy was as follows:

- (a) climate change mitigation: 2.78%
- (b) climate change adaptation: 0%
- (c) the sustainable use and protection of water and marine resources: 0%
- (d) the transition to a circular economy: 0%
- (e) pollution prevention and control: 0%
- (f) the protection and restoration of biodiversity and ecosystems: 0%

Figures below 0.50% have been rounded to 0%.

The disclosed figures, in line with the regulatory guidelines, mean that the Sub-Fund has not been able to collect reliable and complete information about the proportion of taxonomy alignment of the investee companies. Quintet decided not to rely in its disclosures of taxonomy alignment on equivalent information based on complementary assessments and estimates. This is because at this moment in time, a significant degree of estimation would be needed, which would hamper the objective of producing a prudent outcome of such equivalent information.

Furthermore, these figures do not consider any taxonomy alignment information disclosed by funds that the Sub-Fund invested in, as the Sub-Fund is not able to determine at this point in time if such disclosures meet the regulatory equivalent information requirements.

Compliance of the Sub-Fund with the requirements of the EU Taxonomy was not subject to assurance provided by an external auditor.

The Sub-Fund had an exposure of 21.60% to sovereign issuers. The reason for these sovereign exposures is related to risk and diversification considerations. For these sovereign exposures, it was not possible to assess the extent to which they contribute to environmentally sustainable economic activities.

### Did the financial product invest in fossil gas and/or nuclear energy related activities complying with the EU Taxonomy<sup>1</sup>?

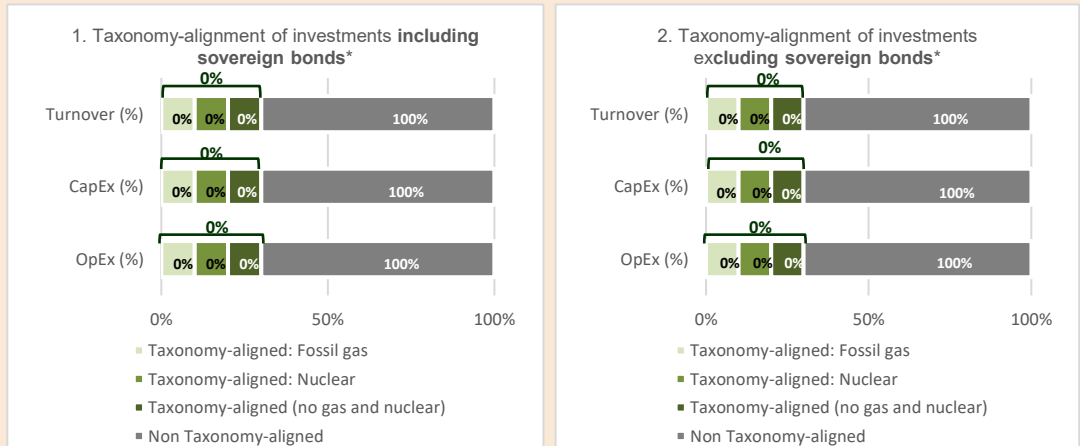

- Yes  In fossil gas  In nuclear energy
- No

<sup>1</sup> Fossil gas and/or nuclear related activities will only comply with the EU Taxonomy where they contribute to limiting climate change ("climate change mitigation") and do not significantly harm any EU Taxonomy objective - see explanatory note in the left hand margin. The full criteria for fossil gas and nuclear energy economic activities that comply with the EU Taxonomy are laid down in Commission Delegated Regulation (EU) 2022/1214.

Taxonomy-aligned activities are expressed as a share of:

- **turnover** reflecting the share of revenue from green activities of investee companies.
- **capital expenditure (CapEx)** showing the green investments made by investee companies, e.g. for a transition to a green economy.
- **operational expenditure (OpEx)** reflecting green operational activities of investee companies.

The graphs below show in green the percentage of investments that were aligned with the EU Taxonomy. As there is no appropriate methodology to determine the taxonomy-alignment of sovereign bonds\*, the first graph shows the Taxonomy alignment in relation to all the investments of the financial product including sovereign bonds, while the second graph shows the Taxonomy alignment only in relation to the investments of the financial product other than sovereign bonds.

This graph represents 67.45% of the total investments

\* For the purpose of these graphs, 'sovereign bonds' consist of all sovereign exposures.

● **What was the share of investments made in transitional and enabling activities?**

The share of investments made in transitional activities during the reference period was 0%.

The share of investments made in enabling activities during the reference period was 1.82%.

Figures below 0.50% have been rounded to 0%.

● **How did the percentage of investments that were aligned with the EU Taxonomy compare with previous reference periods?**

	2023	2024	2025
	0%	0%	0%

are  
sustainable  
investments with an  
environmental  
objective that **do not  
take into account  
the criteria** for  
environmentally  
sustainable  
economic activities  
under Regulation  
(EU) 2020/852

**What was the share of sustainable investments with an environmental objective not aligned with the EU Taxonomy?**

Not applicable

**What was the share of socially sustainable investments?**

Not applicable

**What investments were included under “other”, what was their purpose and were there any minimum environmental or social safeguards?**

Investments included in the "#2 Other" category, i.e. 9.83%, were related to ancillary cash. They also included funds held for diversification purposes (including ETCs and ETFs) that were not aligned with the environmental and social characteristics of the Sub-Fund. For example, funds with a strategy to invest in sovereign bonds comply under Article 6 of the SFDR and ETC fall into this category. There were no minimum environmental or social safeguards for these investments.

## What actions have been taken to meet the environmental and/or social characteristics during the reference period?

When the Sub-Fund invested in individual lines, companies had to adhere to good governance practices. This was assessed at the level of each company, for which the Sub-Fund used specialized external data and research. When the Sub-Fund invested in funds, those funds should have, to the extent possible and feasible, a policy of evaluating and ensuring good governance practices. Where this was not the case, the companies in which these funds invested were analyzed.

The actions taken during the reporting period were as follows:

- Single lines were selected and checked for alignment with the environmental and social characteristics of the Sub-Fund;
- Funds were selected based on their alignment with the environmental and social characteristics of the Sub-Fund and engagements with fund managers took place to monitor their adherence to their funds' policies;
- In addition, for individual lines, commitments were made in areas, directly and indirectly, related to the environmental and social characteristics of the financial product, such as climate change, human rights and labour rights.

In terms of engagement in 2025, the fund - through EOS at Federated Hermes - engaged with 34 companies on 260 ESG issues. Over these 260, 83 were engaged and 40 with an positive outcome.

Key topics included climate change, human capital and rights. Notable outcomes included increased greater lifecycle and energy transparency at Nvidia, AI human-rights assessment and worker impact progress at Microsoft and strengthened management-composition and content-moderation reporting at Apple.

The fund also voted on 782 management proposals and 73 shareholder proposals, opposing management in 13.3% and 60.3% of cases respectively. Key votes included supporting additional & independent scrutiny on working conditions, and separation of CEO and Chair positions at Amazon, Human Rights Impact Assessment of AI-Driven Targeted Advertising at Alphabet and Independent chair position at JP Morgan.

## How did this financial product perform compared to the reference benchmark?

Not applicable.

- ***How does the reference benchmark differ from a broad market index?***

Not applicable.

- ***How did this financial product perform with regard to the sustainability indicators to determine the alignment of the reference benchmark with the environmental or social characteristics promoted?***

Not applicable.

- ***How did this financial product perform compared with the reference benchmark?***

Not applicable.

- ***How did this financial product perform compared with the broad market index?***

Not applicable.

**Reference benchmarks** are indexes to measure whether the financial product attains the environmental or social characteristics that they promote.
